1 Introduction

Testing staging with changes deployed this afternoon. There was a glitch. It was history/document updater . Perhaps it's okay now?

Typing some more to check for errors in console. There. It isn't happening.

Of course, now someone is watching. It's working okay.

But I'm not happy. Did this go okay? Are we there now? There was a put.

Going to leave and come back.

Having left and come back. Does the typing go okay? The document updater problems. Are they gone? How are we doing now?

We seem to be keeping up okay. Hmmmm. Guess a temporary glitch.
